Communications Solutions

Whether you're looking to address basic residential or complex commercial installations, AlarmNet's got you covered.

A Honeywell company, we are the security industry's leading nationwide communications provider that delivers a complete range of products and services for supervised alarm signal transport applications.

For over 15 years, AlarmNet has been the leader in alarm communications technology.

Today, over 400,000 protected premises rely on AlarmNet, and nearly every major central station in the United States is an AlarmNet service provider. As the technology has evolved from the original AlarmNet-A, to AlarmNet-M and then to AlarmNet-C, we are able to provide seamless, uninterrupted service on all of the networks. And now, with AlarmNet-i, we've taken alarm communications the next logical step, over the Internet.

By utilizing multiple technologies—including radio networks, control channel cellular and the Internet—AlarmNet provides a substantial backbone for current and additional services as they become available.

sions for Any Application.

What's more, because AlarmNet provides these services with seamless integration between all technologies, offering one service does not require the same service to be installed at the central station to receive alarm signals. Different services may coexist over complementing networks—providing the most efficient, cost-effective solution for both you and your customers.

AlarmNet provides communication solutions for residential, commercial fire, and commercial burglary applications, supported by a variety of services and products.

Residential Security

Residential communications solutions have never been more affordable than with AlarmNet. With exceptional coverage, back-up services can now be offered on every job.

Commercial Fire

For commercial fire applications, AlarmNet provides the best solutions on the market today. Our product offerings are UL864 Listed, which may eliminate the need for dedicated phone lines at your customer's location. These cost-effective solutions provide you with more opportunities to offer additional enhanced services.

Commercial Burglary

Our commercial burglary services and product line offers extensive coverage and meets UL High-Line security (formerly Grade AA) requirements.

AlarmNet Benefits:

- Network Control Center supervised 24 hours a day, seven days a week, 365 days a year
- Maximizes recurring revenue
- Provides your customers with the ultimate protection
- Keeps the competitive edge
- Highest level of reliability
- Fully redundant disaster recovery site
- Dedicated technical support staff

AlarmNet Services

AlarmNet is designed to be a cost effective alternative or backup to the transmission of alarm signals.

There are currently four types of network services available:

AlarmNet-A is an excellent service for fire applications and is UL864 listed.

AlarmNet-M interfaces with any alarm control panel and is an excellent choice for High-Line security (formerly Grade AA) applications. It has national coverage via the Cingular network.

AlarmNet-C utilizes Control Channel technology that provides a low cost solution for alarm signal back up that is affordable enough to use on every job.

AlarmNet-i uses the Internet to deliver alarm messages and incorporates a very high level of encryption and two-way authentication.

ALARMNET APPLICATION REFERENCE			
Service	Commercial Fire	Commercial Burglary	Residential
AlarmNet-A	7720ULFPLUS	7720PLUS
